M SHAHZEB RAZA

GitHub/mshahzebraza97 | 923-350-450600 | m.shahzebraza.97@gmail.com

Profession Summary

A ◆Frontend Web developer◆ & energetic problem solver with a strong foundation of ◆Web fundamentals◆.

Always believed in the process of "Learn and Apply" which helped strengthen his skillset by building multiple projects.

Skilled in using a variety of Frameworks and technologies like HTML/SCSS, React, MongoDB & Figma throughout his Web-Development journey.

Seeking a part-time **Remote Web/Frontend Developer role** in a Development Team and offering Ambition with strong technical, problem-solving skills.

Education

National University of Sciences & Technology

BE: Mechanical Engineering | 3.5 CGPA | PNEC, KHI Campus | 2016-2020

Army Public School

FSc: Pre- Engineering | 90% | Ordnance Road, RWP Campus | 2014-2016

Projects

Office-Works (Under Process)

An Enterprise Level Web Application developed for a use in an organization to

- manage the procurement and inventory of certain modules
- maintain a record of products in relation to configuration of modules being used in them (along with their quantity)
- calculate the production capacity of any product at any time using its configuration and the quantity of modules available in inventory
- maintain record of modules transactions from store prior to module issuance to track the inventory in real time.

Technologies used: HTML / SCSS / NEXT.JS / Apollo Client / REST APIs / Mongoose

Weather-App

A SaaS Web Application supported by an external API which serves the current weather data to the client based on the input location.

Forkify – A Grocery App

A "Mobile Friendly" Web Application which

- allows user to search recipes from an external API

- serve the search results as ingredients and recipes
- populates shopping list based on recipe's ingredients
- adds recipes to favorites for future use.
- uses browser's "localStorage" for State Persistence

Budgety – A Budget Calculator

A Budget tracking Web Application to manage the expenses and income and show the user about the current available budget.

Developed in HTML/SCSS, Vanilla JS (using MVC architecture)

Natours

A Landing page for Natours Travel Company with amazing UI and animated components. The website makes extensive use of Sass & advanced CSS animations. Concept of modules was also used to make the file structure organized.

Omni-Food

A "Responsive" Static Website for a fictional Restaurant Startup.

Focusses greatly on the UI/UX aspect using HTML/SCSS combined with jQuery Animation Libraries to make it interactive.

Star-Web

A Static Website for a fictional Tour Company.

Designed in Figma and followed by development using HTM/SCSS

Pig Game

A Simple JS Project that lets two users play the "Pig Game".
